

Introduction

Let's make a world cup football game in Scratch!

Step 1: Get the pitch ready for a game

✓ Activity Checklist

- ☐ Start a new project in Scratch.
- ☐ Click on the **stage** next to the sprite and switch to the **Backdrops** tab, then click the **Upload backdrop from file** button and choose the **resources/pitch.jpg** file.
- ☐ Delete the original blank backdrop, and the cat sprite.
- ☐ Our goals need nets! Create a sprite using the **Upload sprite from file** button and select **resources/net.png**. Move the net into the middle of the goal on the left. Rename it **blue goal**.
- ☐ Right-click on the net sprite and click **duplicate**, then move this new

sprite to the goal on the right and rename it **red goal**.

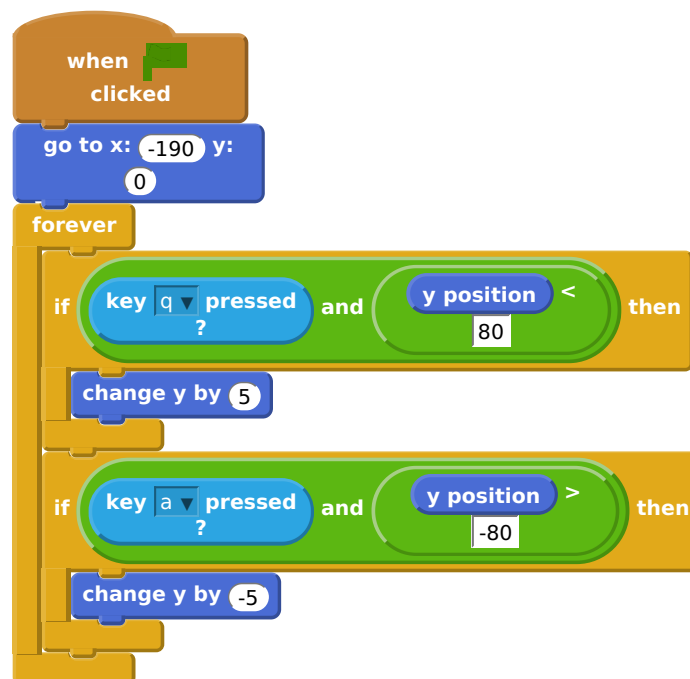

Save your project

Step 2: Add a goalie

Okay – our pitch is looking good! Now let's add some players and get them moving about.

✓ Activity Checklist

- ☐ Click on **Upload sprite from file** and choose **resources/goalie_blue.png**. Rename the sprite **blue goalie**, and drag it near to the left goal.
- ☐ Click on the **grow sprite** button, and click on the **blue goalie** sprite 10 times to scale up the sprite.
- ☐ Click on the **Scripts** tab, and add:

Let's look at the code. We position the goalie, then we loop forever listening for key presses from the player. **Q** moves the goalie up, **A** moves it down. We check the **y position** of the goalie to stop it moving off the screen.

Test your project

Click the green flag.

- ☐ Can you control the goalie by pressing Q and A?
- ☐ What happens when it gets to the edges of the pitch?

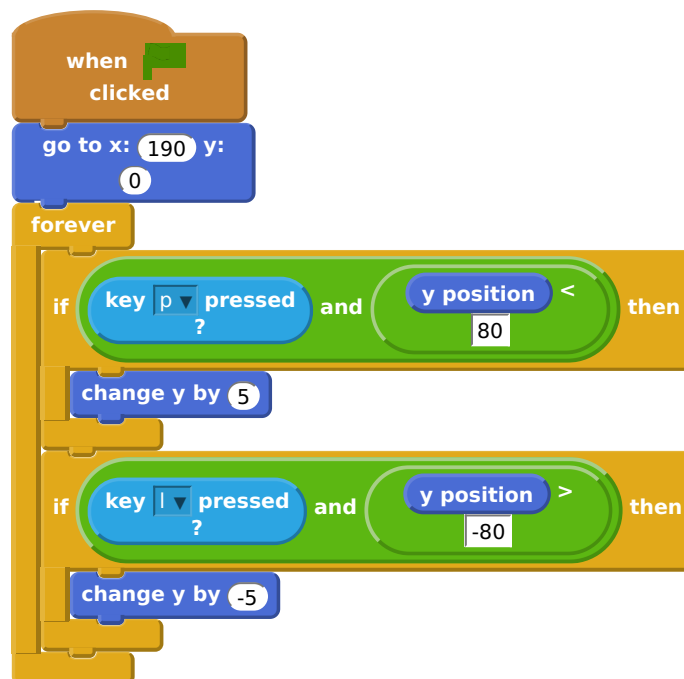

Save your project

Step 3: Add some more players

We can't play a game of football with just one player! We need to add some more.

✓ Activity Checklist

- ☐ Create another sprite using the **Upload sprite from file** button and selecting **resources/goalie_red.png**.
- ☐ Change the name of the sprite to **red goalie**.
- ☐ Drag the sprite on the stage to the right-hand side just in front of the goal.
- ☐ Like before, grow the sprite 10 times so it is as big as the other goalie.
- ☐ Select the **blue goalie** sprite and drag the script to **red goalie** to duplicate it.
- ☐ Select **red goalie**, and modify the script so it looks like this:

You should only have to change three things: the `x position`, and which keys are pressed.

Test your project

Click the green flag.

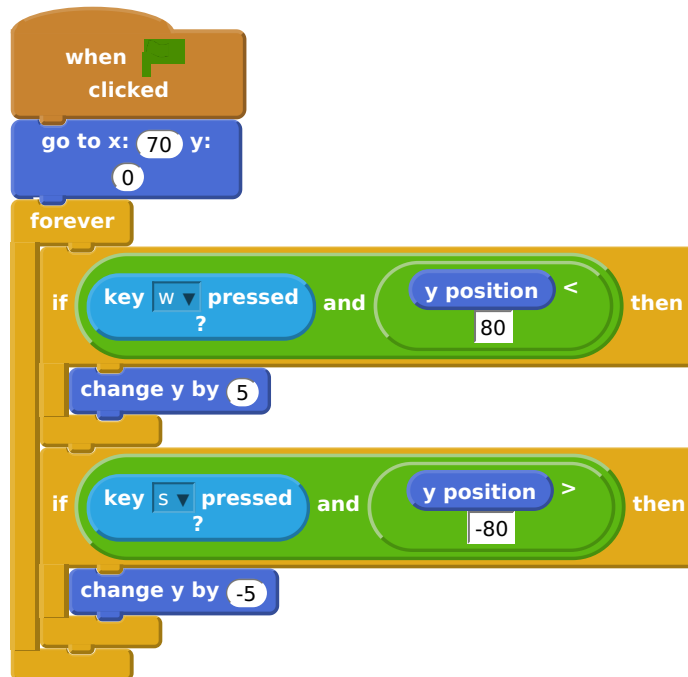

- ☐ Can you control the red goalie by pressing P and L?
- ☐ Do the controls for the blue goalie still work?

[Save your project](#)

Step 4: Add some attacking players

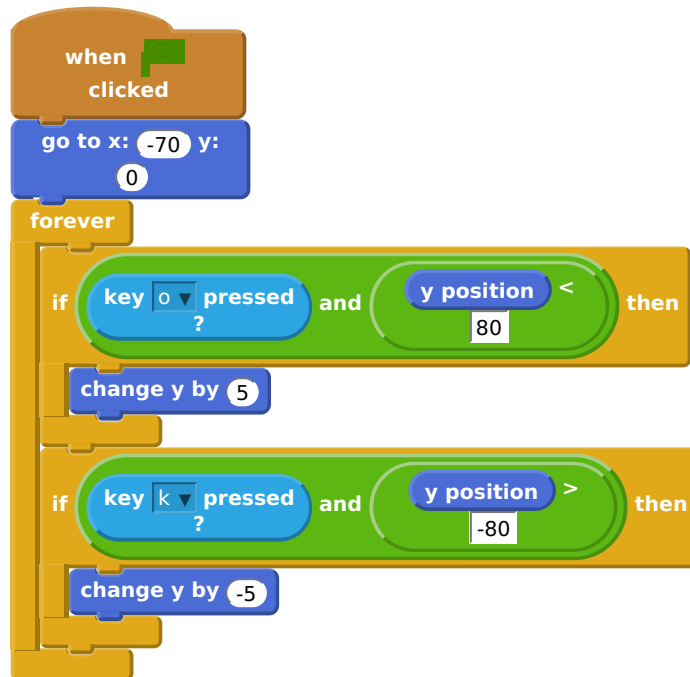

✓ Activity Checklist

- ☐ Create another sprite using the `Upload sprite from file` button and selecting `resources/attack_blue.png`. Rename the sprite **blue attack**.
- ☐ As before, grow the sprite 10 times, so the players are as big as the goalies.
- ☐ Move the sprite into the right-hand side of the pitch, so they are attacking the red team's goal.
- ☐ Drag the script from **blue goalie** to **blue attack**, and modify it to match this:

You should only have to change three things: the **x position**, and which keys are pressed.

- ☐ Create one more sprite using the **Upload sprite from file** button and selecting **resources/attack_red.png**. Rename the sprite to **red attack**.
- ☐ As before, grow the sprite 10 times, so all the players on the pitch are the same size.
- ☐ Move the sprite into the left-hand side of the pitch, so they are attacking the blue team's goal.
- ☐ Drag the script from **blue attack** to **red attack**, and modify it to match this:

You should only have to change three things: the **x position**, and which keys are pressed.

Test your project

Click the green flag.

- ☐ Do you have two teams of working players now? Try pressing Q, A, W and S to control the blue team, and P, L, O and K to control the red team.

Step 5: Add a bouncing ball

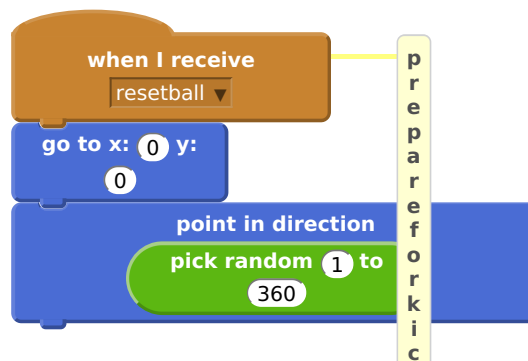

Our game of *football* has **feet**, but no **ball**! Let's fix that.

✓ Activity Checklist

- ☐ Click **Upload sprite from file**
- ☐ Select **resources/ball.png**, and rename the sprite **ball**.
- ☐ In the **Scripts** tab for the ball, add the following:

- ☐ Right-click on this script and click `add comment`. Add the comment “**bounce about**”.
- ☐ Add another script to the ball:

This tells the ball to move to the middle of the pitch for kick-off, and then point in a random direction. Why do we use `resetball`?

- ☐ Don't forget to add the “**prepare for kick-off**” comment, so we remember what this script does!

Test your project

Click the green flag.

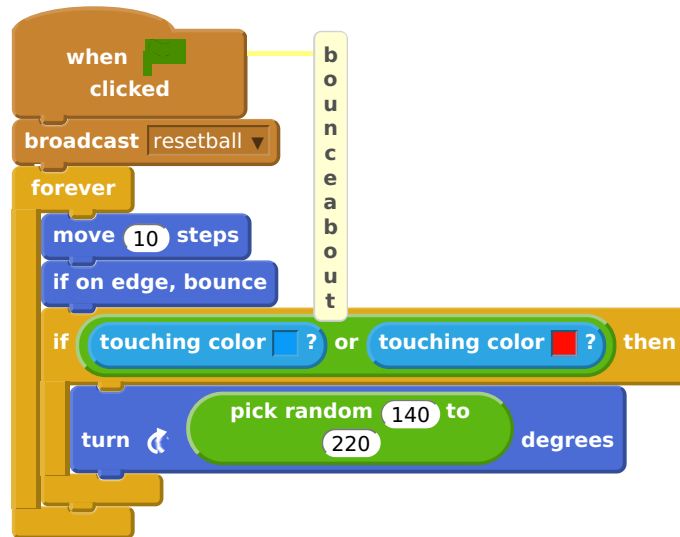

- ☐ Does the ball move?
- ☐ What happens when it hits the edges?
- ☐ Are you happy with the ball speed? Try changing the `move` block to have a smaller or larger number until you're happy with it.
- ☐ What happens when the ball hits your players?

Save your project

Step 6: Kicking the ball

We need the ball to bounce off the players on the pitch.

- ☐ Modify the last code block you created (“**bounce about**”) to look like this:

You should select the colours by clicking on the football players. This change makes the ball sense it is touching a player, and then bounce off them by turning (with a bit of randomness).

Test your project

Press the green flag.

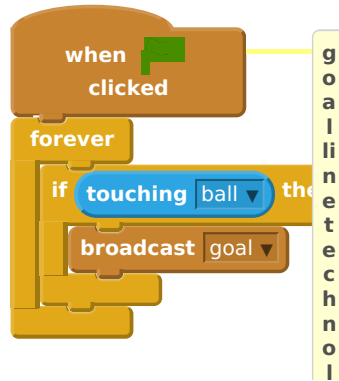

- ☐ What happens now when the ball hits your players? Is it working for both red and blue players?

[Save your project](#)

Step 7: GOOOOOOAAAAALLLLLLLLLL!!!!!!!

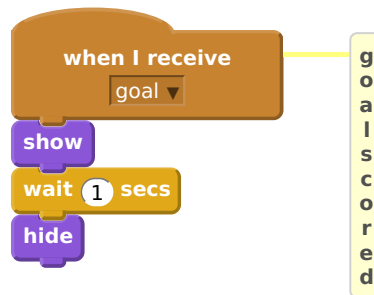

✓ Activity Checklist

- ☐ Select **red goal** and add the following script:

This is like goal line technology - it runs all the time, checking whether the ball is touching the goal, and broadcasting a message when it is.

- ☐ Drag the script to **blue goal** to copy it there as well.
- ☐ Now we need to do something when **goal** is broadcast. Click **Upload sprite from file**.
- ☐ Select **resources/goal_text.png**, and rename the sprite **goal text**.
- ☐ Add this script to **goal text**:

- ☐ Finally, add one more script to **goal text**:

...to ensure the **goal text** begins the game hidden.

Save your project

Test your project

You're ready to play a game! Press the green flag.

What happens when the ball goes in?

Try challenging a partner to a game!

Challenge 1: Keep score

Can you add variables that will keep track of scores for the red and blue teams?

Challenge 2: Tip the table

You might notice sometimes the ball gets stuck bouncing where the players can't reach. Can you add a script to the ball to fix this by "tipping the table" when the spacebar is pressed?

Challenge 3: Referee's whistle

Can you add the sound effect **resources/whistle.mp3** so that the whistle sounds whenever a kick-off takes place?
